RML Example 9: Templates

RML (Report Markup Language) is ReportLab's own language for specifying the appearance of a printed page, which is converted into PDF by the utility rml2pdf.

These RML samples showcase techniques and features for generating various types of ouput and are distributed within our commercial package as test cases. Each should be self explanatory and stand alone.

This is page 1 - frame 1

This test spans two pages (this should be on page 1). It checks to see that using two separate templates works OK. It also tests to see that the "setNextTemplate" tag correctly splits the pages and displays them with the correct template.

Description of page: This page should have a single frame at the bottom of the page displaying this text, a big teal-coloured number "1" above it, and some header information above that.

This is the text for frame 1. This is the text for frame one. This is the text for frame 1. This is the text for frame one. This is the text for frame 1. This is the text for frame one.
