

## RML Example 24: TTfonts

RML (Report Markup Language) is ReportLab's own language for specifying the appearance of a printed page, which is converted into PDF by the utility rml2pdf.

These RML samples showcase techniques and features for generating various types of output and are distributed within our commercial package as test cases. Each should be self explanatory and stand alone.

---

Test of Vera alignment - should touch line

### TrueType font tests

This should be in Vera, and the one above in chunky VeraBold. But if we're running on a platform where we can't find Vera, you won't even see this document...

**This should be in extra chunky VeraBold, flush right.**

This should be in Helvetica Vera **VeraBold** *Veraltalic* **VeraBoldItalic** *VeraltalicBold* and back to Helvetica
