

RML Example 12: Tables

RML (Report Markup Language) is ReportLab's own language for specifying the appearance of a printed page, which is converted into PDF by the utility rml2pdf.

These RML samples showcase techniques and features for generating various types of output and are distributed within our commercial package as test cases. Each should be self explanatory and stand alone.

The email address should be a clickable mailto link built by creating a plugin within the cell. And Robin's job title should be on a separate line to his name. In the third row, we use the newer and easier table cell properties "href" and "destination".

Name	Email
<i>Robin Becker (chief propellerhead)</i>	<i>mailto:robin@reportlab.com</i>
<i>Internal link to back page</i>	<i>Hyperlink to www.reportlab.com</i>

This should be a 5x5 table where some ranges span. Note that the grid and background commands still work on the "underlying" grid; if you grid the whole table, it will show through your 'spanned cells'

This should span the first 3 cells in the top row. It's ordinary left aligned text but could be centred if you want.			D	This should span all five cells in the right column. We vertically centred the text to make it look sensible using a separate stylesheet command. <hr/> some more text
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	

This should be a 5x5 table where some ranges span. Note that the grid and background commands still work on the "underlying" grid; if you grid the whole table, it will show through your 'spanned cells'. Here the span stuff is in the <td> attributes.

This should span the first 3 cells in the top row. It's ordinary left aligned text but could be centred if you want.			D	This should span all five cells in the right column. We vertically centred the text to make it look sensible using a separate stylesheet command. <hr/> some more text
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	

RML Example 12: Tables

This should be a 5x5 table where some ranges span. The column widths have been set as 3cm,10%,10%,10%,30%. The percentage refers to unallocated width only. This also demonstrates the use of <hr> within a <blocktable>.

This should span the first 3 cells in the top row. It's ordinary left aligned text but could be centred if you want.			D	This should span all five cells in the right column. We vertically centred the text to make it look sensible using a separate stylesheet command. <hr/> <hr/> <hr/> <hr/> <hr/> some more text
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	

The same table again, but with a <frameBackground color="palegreen" start="1"/> set.

This should span the first 3 cells in the top row. It's ordinary left aligned text but could be centred if you want.			D	This should span all five cells in the right column. We vertically centred the text to make it look sensible using a separate stylesheet command. <hr/> <hr/> <hr/> <hr/> <hr/> some more text
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	
A	B	C	DB	

Same again, but with a <frameBackground color="lightblue" start="1" left="72" right="36"/> set.

This should span the first 3 cells in the top row. Also cell B spans two rows and two columns			D	This should span all five cells in the right column. We vertically centred the text to make it look sensible using a separate stylesheet command. <hr/> <hr/> <hr/> <hr/> <hr/> some more text
A	B		DB	
A			DB	
A	B	C	DB	
A	B	C	DB	

RML Example 12: Tables

This shows some pointers on doing financial tables. It demonstrates the decimal alignment and multiple lines. We also used a local `<td color="red">` attribute for the negative cell; ideally one wants to make the data drive the colour, so that generator apps don't need to make para tags in every cell if they want red negatives. If we move to dynamic RML, then a number-and-cell-formatting function is possible, but static RML sees everything as text. Note that when the value does not contain the decimal character but there are non-digit characters at the end, it tries to align the rightmost digits with other rows.

Corporate Assets	Amount
Fixed Assets	1,234,567.89
Legal Offense Fund	86,000,000
Company Vehicle	1,234.8901
Petty Cash	42
Intellectual Property	Questionable
Bank Overdraft	(13,029)
Goodwill	(742,078,231.56)
Flat Screen TV	27 inches
Net Position	Doomed. Really!

RML Example 12: Tables

The same table again this time in a <topPadder> tag (it pushes the entity to the bottom of the page).

Corporate Assets	Amount
Fixed Assets	1,234,567.89
Legal Offense Fund	86,000,000
Company Vehicle	1,234.8901
Petty Cash	42
Intellectual Property	Questionable
Bank Overdraft	(13,029)
Goodwill	(742,078,231.56)
Flat Screen TV	27 inches
Net Position	Doomed. Really!

RML Example 12: Tables

Individual <td> tags that contain pure strings can override the following attributes: *fontName*, *fontSize*, *fontColor*, *leading*, *leftPadding*, *rightPadding*, *topPadding*, *bottomPadding*, *background*, *align*, *vAlign*, *lineBelowThickness*, *lineBelowColor*, *lineBelowCap*, *lineBelowCount*, *lineBelowSpace*, *lineAboveThickness*, *lineAboveColor*, *lineAboveCap*, *lineAboveCount*, *lineAboveSpace*, *lineLeftThickness*, *lineLeftColor*, *lineLeftCap*, *lineLeftCount*, *lineLeftSpace*, *lineRightThickness*, *lineRightColor*, *lineRightCap*, *lineRightCount*, *lineRightSpace* .

<i>fontName</i>	Courier
<i>fontName</i>	Helvetica
<i>fontSize</i>	8
<i>fontSize</i>	14
<i>fontColor</i>	red
<i>fontColor</i>	blue
<i>leading</i>	leading is 16
<i>leading</i>	leading is 12

<i>bottomPadding</i>	24
<i>background</i>	pink
<i>background</i>	lightblue
<i>align</i>	left
<i>align</i>	center
<i>align</i>	center leftPadding 00
<i>align</i>	center leftPadding 10
<i>align</i>	right
<i>vAlign</i>	top
-	-

RML Example 12: Tables

- <i>vAlign</i> -	<i>middle</i>
- <i>vAlign</i> -	<i>bottom</i>
<i>lineBelow</i>	<i>red 1pt thickness</i>

RML Example 12: Tables

This is the previous table again, but this time in a <ytopPadder> tag (which begins immediately after the green <hr>) so the the first chunk is pushed to the bottom of the frame.

<i>fontName</i>	Courier
<i>fontName</i>	Helvetica
<i>fontSize</i>	8
<i>fontSize</i>	14
<i>fontColor</i>	<i>red</i>
<i>fontColor</i>	<i>blue</i>
<i>leading</i>	<i>leading</i> <i>is</i> 16
<i>leading</i>	<i>leading</i> <i>is</i> 12
<i>leftPadding</i>	10
<i>leftPadding</i>	16
<i>rightPadding</i>	10
<i>rightPadding</i>	24
<i>topPadding</i>	10
<i>topPadding</i>	24
<i>bottomPadding</i>	10
<i>bottomPadding</i>	24
<i>background</i>	<i>pink</i>
<i>background</i>	<i>lightblue</i>
<i>align</i>	<i>left</i>
<i>align</i>	<i>center</i>
<i>align</i>	<i>center leftPadding 00</i>
<i>align</i>	<i>center leftPadding 10</i>
<i>align</i>	<i>right</i>
<i>-</i> <i>vAlign</i> <i>-</i>	<i>top</i>
<i>-</i> <i>vAlign</i> <i>-</i>	<i>middle</i>

RML Example 12: Tables

- <i>vAlign</i> -	<i>bottom</i>
<i>lineBelow</i>	<i>red 1pt thickness</i>

RML Example 12: Tables

This table is using `<xpre>` tags around the contents of the right hand column.

<i>fontName</i>	Courier
<i>fontName</i>	Helvetica
<i>fontSize</i>	8
<i>fontSize</i>	14
<i>fontColor</i>	red
<i>fontColor</i>	blue
<i>leading</i>	leading is 16
<i>leading</i>	leading is 12
<i>leftPadding</i>	10
<i>leftPadding</i>	16
<i>rightPadding</i>	10
<i>rightPadding</i>	24
<i>topPadding</i>	10
<i>topPadding</i>	24
<i>bottomPadding</i>	10
<i>bottomPadding</i>	24
<i>background</i>	pink
<i>background</i>	lightblue
<i>align</i>	left
<i>align</i>	center
<i>align</i>	right
- <i>vAlign</i> -	top
- <i>vAlign</i> -	middle
- <i>vAlign</i> -	bottom

Bulk Data Support

Very often one wants to get quite a lot of text or numeric data into a table - for example from a database query or imported data file. Quoting all of this correctly as XML and wrapping in in td and tr tags is time and memory consuming, unquoting and parsing it all back even more so. Therefore, instead of explicitly creating row and cell tags, you can now use a new **bulkData** tag. This lets you specify a delimiter for fields (default is comma) and for records (default is newline), and rml2pdf will break this up.

If you want to avoid having to quote ampersands, wrap this in a CDATA escape sequence.

Of course if you want per-cell formatting or to put arbitrary flowables in a cell, you must use the other tags.

Product	Profit
Sprockets	26
Widgets	34
Thingummies	217
Bits & Bobs	23
Total	277

You can specify a tab with **fieldDelim="t"**, but we generally advise against using any whitespace character as a delimiter if you have a choice. You can also specify fine-grained "stripping" control; the default behaviour is to strip whitespace off the top and bottom of the overall data block, so blank lines are excluded, and off the ends of each row so line endings and indentation don't matter, but not off each cell. Note that the strings in the cells may contain spaces and these spaces will be respected in formatting. You are also advised to use a CDATA escape sequence around your data so that "&","<" and ">", characters don't need special handling.

Excel Bulk Data Support

The **excelData** tag is very similar to the bulk data support, but reads the bulk data from an Excel file instead of from delimited textual data. The **range** attribute is optional.

Product	Profit

Bits & Bobs	23.0
Total	277.0

RML Example 12: Tables

Colour cycles by rows and columns

It's sometimes nice to alternate colours by row (e.g. a pale color then white) to visually break up a long table. The style lets you specify **cycles** as well as single colours. Here we have created a style command which cycles through pale green and white, like old stacks of fanfold paper...

Splitting over pages - top and bottom rows

Sometimes a table splits over a page and you don't have a grid, so the bottom part (and top of the new page) have no line boxing them in. The splitfirst and splilast magic coordinates can be used to insert a line drawing routine into the style for this. I used an ugly thick purple line!

No Split Rows

Sometimes a table splits over a page or frame and the split occurs at an inopportune point say after a sub heading. You can use the **noSplitRowCount** attribute of the **>tr<** tag to inhibit splitting at certain rows. First see the table without any special treatment.

RML Example 12: Tables

This is a table with some vertical text.

Vertical orientation	Horizontal orientation	Horizontal orientation

RML Example 12: Tables

HTML style row spans & use of ident(helps when errors happen).

Scenario	User device OS	Browser required	Web Interface site	Client	Client install
A	Windows XP, Windows XP Embedded	Yes	Desktop Appliance	Desktop Appliance Lock in Citrix online plug-in 12.1	Preinstalled by administrator
	Linux			Citrix Receiver for Linux 11.100	
B	Windows XP, Windows XP Embedded	No	XenDesktop Services	See manufacturer's documentation for the relevant thin client	Preinstalled by administrator
C	Windows 7, Windows Vista, Windows XP	Yes	XenDesktop Web	Desktop Viewer in Citrix online plug-in 12.1	Preinstalled by administrator or through auto client detection or user prompt
	Windows CE			Client for Windows CE 10.	
	Macintosh OS X			Citrix online plug-in for Macintosh 11.2	

RML Example 12: Tables

HTML style row and column spans.

Component	Specifications	
<p>pServerOne pServerTwo</p>	<p>CPU</p>	<p>Up to 32 64-bit Intel VT or AMD-V x86 CPUs or equivalent. 1.5 GHz minimum recommended clock speed, 2.0 GHz or faster multicore CPUs recommended. Both of the above CPU types support hardware virtualization, which is a requirement. In addition, the BIOS setting for hardware virtualization must be enabled. For more information, see the documentation for your BIOS. Important: If your CPUs do not support hardware virtualization, you cannot complete the installation.</p>
	<p>Memory</p>	<p>Minimum 8 GB RAM.</p>
	<p>Hard Disk</p>	<p>100 GB locally attached storage (for example, PATA, SATA, or SCSI).</p>
	<p>NIC</p>	<p>100 Mbps (megabits per second) or faster network interface card (NIC).</p>
<p>pXenCenterComputer</p>	<p>A computer running: For more information about the specifications for this device, see the <i>XenServer Installation Guide</i>.</p>	
<p>User devices</p>	<p>Computers running: For more information about user device requirements, see XenDesktop 4 System Requirements.</p>
